Staff comments on 9H Ranch (Oasis Ranch new electric well):

The proposed project will establish reliable watering facilities for livestock and wildlife. The Natural Resource Conservation Service (NRCS) has identified upland water development as a best management practice (BMP). Reliable water sources are integral aspects of any rangeland management planning that address livestock distribution. By improving livestock distribution, the project will support increased plant productivity, improved wildlife habitat, and greater plant species diversity. Additional benefits include protecting Wyoming's open spaces and supporting the income and stability of individual producers and the local communities.

With the successful development of the well and off stream watering locations there is the potential to one day excluded the riparian area from grazing.
